

# Sensitive Data Exposure in OWASP Juice Shop

Going to <url>/ftp to see the exposing files

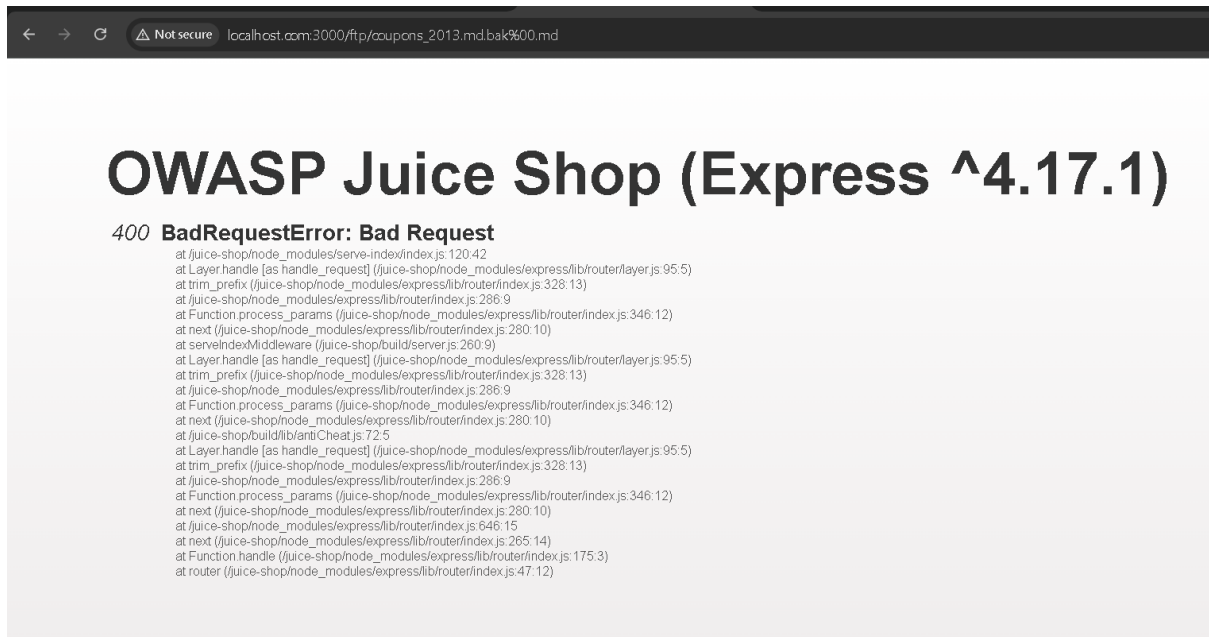

Assuming the coupons\_2013.md.bak contains the backup files as the name relates with the task

Performing NULL Byte Injection to trick the security control system to bypass the error

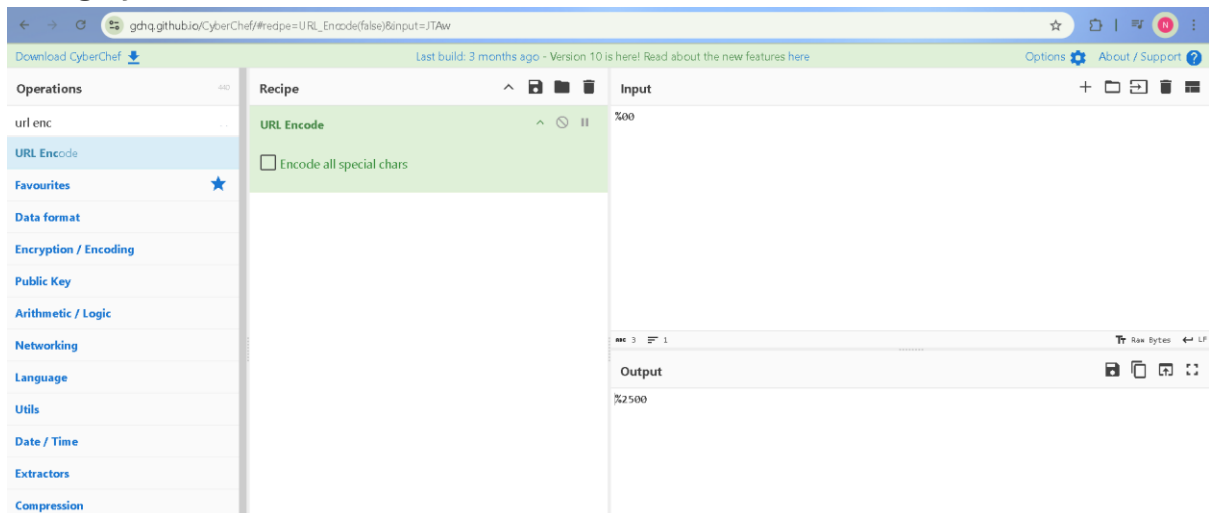

## Adding %00 Null byte

encoding %00 in the url

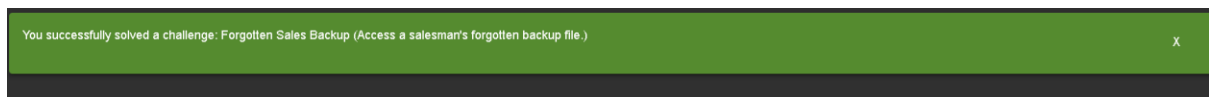

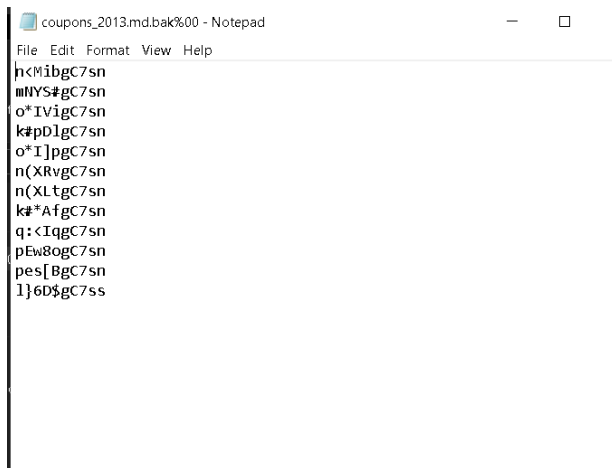

use cyberchef or burp suite decoder to encode the %00 in url

using cyberchef

%00 is encoded as %2500

so using %2500 instead of %00

Exploited using Null byte injection vulnerability
